

# Patch Authority Ultimate<sup>®</sup>

The complete way to manage software patches

## OVERVIEW

### THE PATCH MANAGEMENT CHALLENGE

Security of the network environment is a critical IT responsibility. IT Administrators are challenged to maintain security and stay within budget. Patching servers, desktops and virtual machines is essential to maintaining adequate network security. IT Administrators must also be diligent in securing the desktop by maintaining patches for many other application vendors beyond Microsoft. IT Administrators must have a patch management solution that is robust, comprehensive and offers the ability to easily automate patching.

### PATCH AUTHORITY ULTIMATE

Patch Authority Ultimate enables IT Administrators to secure desktops and servers by rapidly and accurately identifying and applying the latest patches for a broad range of applications and operating systems. Most importantly, Patch Authority Ultimate is quickly installed and easy to use with enhanced central console views and exceptional reporting capabilities.

### NEW – COMPLETE PHYSICAL AND VIRTUAL MACHINE SUPPORT

Scanning and patching applications and operating systems on virtual machines are not supported by many patch management solutions today. Patch Authority Ultimate scans and patches both offline and online virtual machines\*. This new functionality is especially critical for maintaining security on virtual servers and desktops.

**Patch Authority Ultimate<sup>®</sup>** Patch Authority Ultimate is a robust, multi-faceted patch management application that includes a robust patch detection engine for automating the patching of software on virtual and physical desktop machines and servers, minimizing the amount of time required for IT administrators to secure the network.

## KEY BENEFITS

### ACCURATE AND COMPREHENSIVE PATCHING

Powered by Shavlik<sup>®</sup>, Patch Authority Ultimate patches desktops and servers, including physical and virtual\*, with Microsoft<sup>®</sup> operating systems plus 3rd party patches for Adobe<sup>®</sup>, Firefox<sup>®</sup>, WinZip<sup>®</sup> and more.

### AUTOMATED SOLUTION

Patch Authority Ultimate provides a single, easy to use console. The intuitive design supports multi-tasking for simultaneous scans and deployments, a customizable home page, user-defined charts and reports, and an enhanced navigation toolbar.

### EASE OF USE

Patching can be done in as little as 2 clicks: scan, and then deploy. But behind the simplicity are enhanced options to get as granular and exercise as much control as you like. Options include patch grouping, machine grouping, filtering, agent management, scheduling and extensive reboot choices.

### ADVANCED REPORTING

Patch Authority Ultimate enables executives, compliance officers and IT administrators to know the state of security on the enterprise network with over 20 built-in IT reports on patch status.

\*VMWare<sup>®</sup> ESX Server 3.0 or later, VirtualCenter 2.0 or later, Server, Workstation 4.0 or later

## SERVERS, DESKTOPS AND NOTEBOOKS

- Scan, patch and deploy for Microsoft operating systems and applications or 3rd party, custom and legacy applications
- Scan, patch and deploy for physical and/or virtual\* servers/desktops
- Scan, patch and deploy for applications and operating systems hosted on offline virtual servers\*

## REPORTING

- Over 20 standard reports for status on scans, patches and deployments
- Customized reports for compliance offices and executives

## AUTOMATION

- Industry leading patch database maintained by Shavlik
- Create templates for scanning, patching and deployment to manage groups of computers
- Role based administration for assigning who in the IT organization can perform scanning, patching or deployments of patches

## LICENSING

Patch Authority Ultimate is licensed according to the number of named servers and named computers that will be patched. Named servers and named computers are licensed separately. If the patch updating services are not renewed, the software may cease to operate. For pricing contact your ScriptLogic® reseller or call ScriptLogic at 1-800-424-9411.

\*VMWare ESX Server 3.0 or later, VirtualCenter 2.0 or later, Server, Workstation 4.0 or later

## KEY FEATURES

### COMPREHENSIVE PATCHING

Patches x86 and x64 versions of Windows®, Office, Server products (e.g. Exchange, IIS, SQL®, BizTalk®, etc.), WinZip®, Adobe®, Real®, Firefox® and more. Patch Authority Ultimate utilizes the Shavlik patching engine. Patching can be done with agent or agent-less method. Mobile users can install a self-protecting agent.

### EXTENSIVE AUTOMATED FUNCTIONS

Scans, downloads, patch deployments and agent installs can be performed simultaneously with the multi-tasking capability. Includes 20 standard reports so both executives and IT can know the state of security for the enterprise network. Role based administration enables scans, deployments and reporting to be delegated and performed by different individuals within the IT organization.

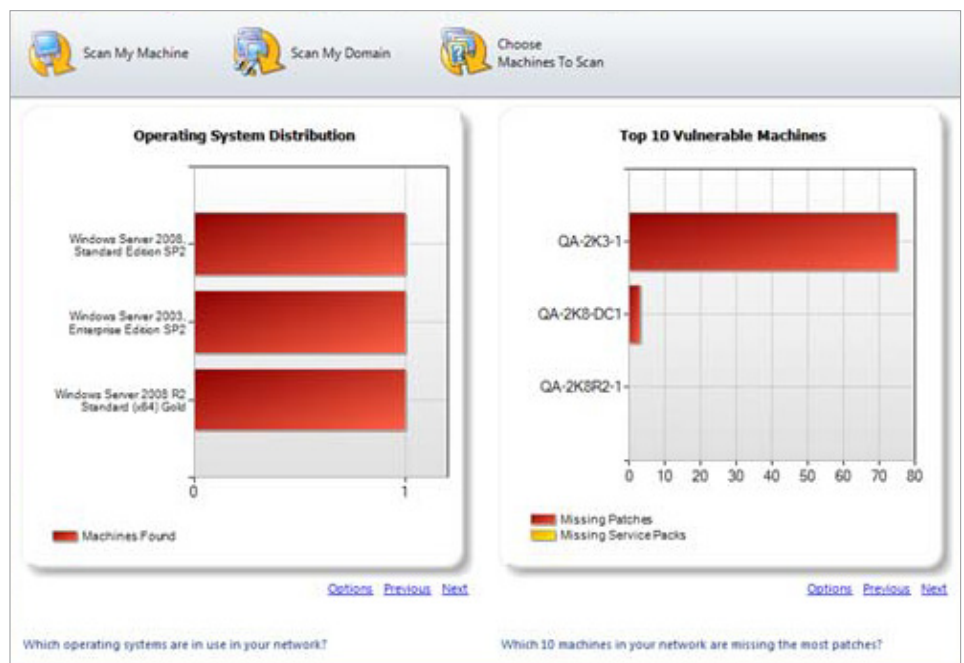

### PHYSICAL AND VIRTUAL MACHINE SUPPORT

Scan and apply required patches for physical and virtual machines, whether the virtual machine is offline or online. Active Directory OUs, IP address ranges, system type, server or imported lists can be used to determine which machines to group for patch management tasks.

### EASY TO APPLY AND USE

Installs quickly and enables IT to begin scanning to detect required patches within an hour. The new user interface on the central console provides an easy to navigate menu and six status charts for quickly determining if patches need to be applied.

Patch Authority Ultimate's comprehensive approach to patching includes robust reporting.
